

RAJIV GANDHI PROUDYOGIKI VISHWAVIDYALAYA, BHOPAL

Credit Based Grading System

Chemical Engineering, III-Semester

ES-3001 Energy, Environment, Ecology & Society

Unit –I

Energy- Sources of Energy : Renewable & Non Renewable, Fossil fuel, Biomass Geothermal, Hydrogen, Solar, Wind, hydal, nuclear sources.

Unit –II

Ecosystem – Segments of Environment: Atmosphere, hydrosphere, Lithosphere, biosphere. Cycles in Ecosystem – Water, Carbon, Nitrogen. Biodiversity: Threats and conservation,

Unit –III

Air Pollution & Sound Pollution -

Air Pollution: Air pollutants, classification, (Primary & secondary Pollutants) Adverse effects of pollutants. Causes of Air pollution chemical, photochemical, Green house effect, ozone layer depletion, acid Rain.

Sound Pollution: Causes, controlling measures, measurement of sound pollution (deciblage), Industrial and non – industrial.

Unit –IV

Water Pollution– Water Pollution: Pollutants in water, adverse effects. Treatment of Domestic & Industrial water effluent.

Soil Pollution – Soil Profile, Pollutants in soil, their adverse effects, controlling measures.

Unit –V

Society, Ethics & Human values– Impact of waste on society. Solid waste management (Nuclear, Thermal, Plastic, medical, Agriculture, domestic and e-waste). Ethics and moral values, ethical situations, objectives of ethics and its study . Preliminary studies regarding Environmental Protection Acts , introduction to value education, self exploration, sanyam & swasthya.

Credit Based Grading System

Chemical Engineering, III-Semester

CM-3002 Chemical Instrumentation

COURSE OBJECTIVE

To gain the knowledge of different process instruments, which used in different chemical industries such as refineries, cement, polymer, insecticides, pesticides, fertilizers etc.

COURSE CONTENT

Introduction to chemical process instrumentation, process variables, static and dynamic characteristics of instruments & their general classification

Elements of measuring systems & their functions, principles, construction and operation of instruments for measurement

Control/ indication/ recording of process variables like pressure, flow, level, humidity and composition.

Principles of transducers, electro pneumatic, pneumatic, electrical & multi-pressure.

Process instrumentation diagram and symbols, process instrumentation for process equipments such as distillation column, Heat exchanger, fluid storage vessel.

COURSE OUTCOMES

1. Ability to familiarize basic concepts of chemical process instrumentation.
2. Ability to understand principle construction and operation of instrument for measurement.
3. Ability to understand control/recording of process variable like pressure flow level, humidity and composition.
4. Ability to familiarize principles of electromagnetic pneumatic, electrical and multipressure transducers.
5. Ability to design instrumentation diagrams for process equipment such as distillation column, heat exchanger and fluid storage vessel

Topics for the Laboratory

1. Time constant of pH-meter
2. Study of Bourdon tube pressure gauge
3. Study of Bellow tube pressure gauge
4. Calibration of different instruments used in chemical processes
5. Study of electro-pneumatic transducers for pressure, flow, level
6. Measurement of water level using differential pressure meter
7. Measurement of flow using electromagnetic flow meter
8. Measurement of flow using differential pressure cell across orifice/ venturimeter.

W.E.F. July 2017

Academic Session 2017-18

EVALUATION

Evaluation will be continuous an integral part of the class as well through external assessment. Laboratory assessment will be based on assignments, presentations, and interview of each candidate.

Chemical Engineering, III-Semester

CM-3003 Material & Energy Balance

COURSE OBJECTIVE The objective of this course to understand and apply the basics of calculations related to material and energy flow in the processes. In addition to make practical approach to solve industrial related material energy balance problems.

COURSE CONTENT

Mathematical and Engineering calculation- Units, different unit systems, conversion of unit from one system to other, dimensions, dimensional analysis, dimensional group, fundamental of mole concept, composition of solid, liquid and gases, Basic Stoichiometric calculation.

Ideal Gases & Vapor pressure- Introduction of ideal gas, behavior of ideal gases, real gas, Vander Waal equation, compressibility factor method to solve cubic equation, vapour pressure, Raoult's Law, Humidity, relative humidity, humid heat, humid volume, dew point, humidity chart and its use.

Material balance without chemical reaction - Fundamental of conservation of mass, Introduction of component balance, solving material balance without simultaneous equation for different unit operations, solving material balance at steady state and unsteady state, recycle, by pass and purge calculations.

Material balance with chemical reaction- Introduction of component balance, solving material balance with chemical reactions, recycles, by pass and purge calculation with chemical reactions, combustion calculations.

Energy balance - Heat capacity, calculation of enthalpy changes, calculation of standard heat of reaction, heats of formation, combustion, solution, mixing etc., effect of pressure and temperature on heat of reaction, energy balance with chemical reaction.

Topics for the Laboratory

1. Determination of boiling point relation with respect to concentration of caustic soda and verify Dehring' rule.
2. Application of dry and wet bulb thermometer to find out atmospheric humidity.
3. Use of humidity chart to find enthalpy dew point humid heat and saturation.
4. Solubility at room temperature and boiling point of urea in water and verify the material balance.
5. Crystallization of copper sulfate in saturated solution by cooling and finding out the crystal yield.
6. To find out the heating value of coal using a calorimeter
7. Combustion of coal & performing the material balance
8. Proximate analysis of coal sample

W.E.F. July 2017

Academic Session 2017-18

9. Measurement of flame temp and compare actual & theoretical temp (Bunsen-Burner, Sprit Lamp, Kerosene Lamp.)
10. To find the heat of reaction using calcium oxide and water.

COURSE OUTCOMES

1. Ability to familiarize with different unit systems and dimensional analysis.
2. Ability to understand concept of ideal gas, real gas, vapor pressure and humidity.
3. Ability to solve material balance problems involving recycle, bypass and purge, without chemical reaction.
4. Ability to solve material balance problems involving recycle, bypass and purge, with chemical reaction.
5. Ability to calculate energy balance using enthalpy changes and solve energy balance involving chemical reactions

EVALUATION

Evaluation will be continuous an integral part of the class as well through external assessment. Laboratory assessment will be based on assignments, presentations, and interview of each candidate.

Chemical Engineering, III-Semester

CM-3004 Advance Engineering Chemistry

Ceramics: Definition & Classification of ceramic materials based on composition, properties & applications, Electro-ceramics, magnetic ceramics, Fine ceramics & Glass-ceramics Natural ceramic minerals & materials such as Clay family, Quartz/Quartzite, Feldspar, Bauxite family, Dolomite, Magnesite.

Refractory: Introduction: raw materials, Fabrication and firing, General manufacturing techniques, Properties and applications of following refractories: Acid (Silica) Refractories, Basic Refractories, Burnt refractories, Sintered, fused refractories, and Insulating Refractories, Castables.

Glass: Definition of glass: Thermodynamic study for glass formation, Glass transitions Conditions of vitrification; Glass processing: selection of raw materials, effects of different oxides on glass properties, batch preparation, melting in glass tank furnace, refining of glass, Forming process: Blowing, molding, shaping etc

Oils and Fats: Vegetable oils by solvent extraction, processing of animal fats, hydrogenation and esterification of oils; Soaps and Detergents Bathing & laundry soaps, cationic and anionic detergents, surface active agents.

Chemical Kinetics: Rate constant, order and molecularity of a reaction, zero, 1st, 2nd and 3rd order reactions; methods of determination of order of reactions; chemical equilibria Reaction rate theories, Arrhenius, parameters, Catalysis (including enzyme catalysis), effect of catalysis on reaction rate.

COURSE OUTCOMES

1. Ability to familiarize with ceramics and its processing.
2. Ability to understand concept of general manufacturing techniques of refractory.
3. Ability to understand concept of processing of glass and its casting.
4. Ability to understand the processing of oils and fats.
5. Ability to understand the reaction rate mechanism.

EVALUATION

Evaluation will be continuous an integral part of the class as well through external assessment. Laboratory assessment will be based on assignments, presentations, and interview of each candidate.

List of Experiments

1. To determine the viscosity of a viscous liquid by falling sphere method
2. Determination of saponification value of oil sample
3. Application of pH meter to find acidity and alkalinity of a solution.
4. To study the hydrolysis of cane sugar solution in the presence of an acid by Fehling's solution method and to find out the reaction constant.
5. To determine the % composition of a given binary liquid solution by polarimeter.
6. To determine the solubility of a sparingly soluble salt in water by conductance measurement.
7. Preparation of laundry soap and to determine its yield
8. Investigation of Appropriate Refractory Material for Laboratory
9. Manufacturing of glass and ceramics in laboratory scale.

Chemical Engineering, III-Semester

CM-3005 Chemical Engineering Thermodynamics

COURSE OBJECTIVE

The objective of this course to understand the theory and applications of classical thermodynamics, thermodynamic properties, equations of state, methods used to describe, compression and expansion of fluids.

COURSE CONTENT

Basic concepts of work & heat system, properties and state of systems; first law of thermodynamics; application, batch flow processes; steady & unsteady state flow.

Critical properties corresponding state compressibility, PVT behavior of pure fluids virial equation, cubic equation, generalized correlation & eccentric factor, behavior of liquid, second law of T.D, & its application.

Adiabatic reactions, Equilibrium in homogeneous and heterogeneous reactions.

Carnot cycle, Carnot theorem, thermodynamics temperature scales, concept of entropy, calculation of entropy for various systems, entropy for real system.

Effect of pressure on specific heat, Joule Thompson effect, third law of thermodynamics & its applications.

Compression & expansion of fluids; single stage, multiple stage requirements & efficiency along with effect & engineering along with effects clearance, compression of real gas.

COURSE OUTCOMES

1. Ability to understand basic concepts of thermodynamics and first law
2. Ability to estimate PVT behaviors and critical properties of fluids.
3. To provide knowledge & application of second law of thermodynamics.
4. To provide knowledge & application of third law of thermodynamics.
5. To analyze effect of pressure on specific heat, compression & expansion of fluids.

EVALUATION

Evaluation will be based on continuous an integral part of the class as well through external assessment.

Chemical Engineering, III-Semester

CM-3006 Computer Programming-I (JAVA)

Basic Java Features - C++ Vs JAVA, JAVA virtual machine, Constant & Variables, Data Types, Class, Methods, Objects, Strings and Arrays, Type Casting, Operators, Precedence relations, Control Statements, Exception Handling, File and Streams, Visibility, Constructors, Operator and Methods Overloading, Static Members, Inheritance: Polymorphism, Abstract methods and Classes

Java Collective Frame Work - Data Structures: Introduction, Type-Wrapper Classes for Primitive Types, Dynamic Memory Allocation, Linked List, Stack, Queues, Trees, Generics: Introduction, Overloading Generic Methods, Generic Classes, Collections: Interface Collection and Class Collections, Lists, Array List and Iterator, Linked List, Vector. Collections Algorithms: Algorithm sorts, Algorithm shuffle, Algorithms reverse, fill, copy, max and min Algorithm binary Search, Algorithms add All, Stack Class of Package java. Util, Class Priority Queue and Interface Queue, Maps, Properties Class, Un-modifiable Collections.

Advance Java Features - Multithreading: Thread States, Priorities and Thread Scheduling, Life Cycle of a Thread, Thread Synchronization, Creating and Executing Threads, Multithreading with GUI, Monitors and Monitor Locks. Networking: Manipulating URLs, Reading a file on a Web Server, Socket programming, Security and the Network, RMI, Networking, Accessing Databases with JDBC: Relational Database, SQL, MySQL, Oracle

Advance Java Technologies - Servlets: Overview and Architecture, Setting Up the Apache Tomcat Server, Handling HTTP get Requests, Deploying a web Application, Multitier Applications, Using JDBC from a Servlet, Java Server Pages (JSP): Overview, First JSP Example, Implicit Objects, Scripting, Standard Actions, Directives, Multimedia: Applets and Application: Loading, Displaying and Scaling Images, Animating a Series of Images, Loading and playing Audio clips

Advance Web/Internet Programming (Overview): J2ME, J2EE, EJB, XML.

6. Cay Horstmann, Big JAVA, Wiely India.

List of Program to be perform (Expandable)

1. Installation of J2SDK
2. Write a program to show Scope of Variables
3. Write a program to show Concept of CLASS in JAVA
4. Write a program to show Type Casting in JAVA
5. Write a program to show How Exception Handling is in JAVA
6. Write a Program to show Inheritance
7. Write a program to show Polymorphism
8. Write a program to show Access Specifiers (Public, Private, Protected) in JAVA
9. Write a program to show use and Advantages of CONSTRUCTOR
10. Write a program to show Interfacing between two classes
11. Write a program to Add a Class to a Package
12. Write a program to show Life Cycle of a Thread
13. Write a program to demonstrate AWT.
14. Write a program to Hide a Class
15. Write a Program to show Data Base Connectivity Using JAVA
16. Write a Program to show “HELLO JAVA ” in Explorer using Applet
17. Write a Program to show Connectivity using JDBC
18. Write a program to demonstrate multithreading using Java.
19. Write a program to demonstrate applet life cycle.
